

ABSTRACT

A thumbnail size flash memory card connector including an insulator, a moveable cover and eleven connecting terminals. An opening recess and a mis-insert-proof structure are configured on the insulator of the connector, therewith enabling containment of a signal contact portion of a miniSD memory card therein, and therewith prevents inserting the signal contact portion in a wrong direction. The connector utilizes press-fit strips configured on the movable cover to directly press-fit onto slideways configured on two sides of the signal contact portion of the miniSD memory card, thereby firmly securing the signal contact portion of the miniSD memory card, and constituting a good electrical connection with contact terminals of the connector.
